Roll No. : S031	Name: Panvir
Class : SYIT	Batch : 1
Date of Assignment : 15-7-26	Date/Time of Submission : 15-7-26

Q.A farmer wants a program to perform basic calculations related to farming.

The program should:

- Display the farmer's profile.
- Add the weights of two harvested crops.
- Find the square root of the total harvested area.
- Calculate the area of a triangular field.
- Swap the quantities of two fertilizer bags if entered in the wrong order.

Code:

```

import math

name = input("Enter Farmer Name: ")
print("Farmer Name:", name)

crop1 = float(input("Enter weight of Crop 1: "))
crop2 = float(input("Enter weight of Crop 2: "))
print("Total Weight =", crop1 + crop2)

area = float(input("Enter Harvested Area: "))
print("Square Root =", math.sqrt(area))

base = float(input("Enter Base: "))
height = float(input("Enter Height: "))
print("Triangle Area =", 0.5 * base * height)

bag1 = int(input("Enter Bag 1 Quantity: "))
bag2 = int(input("Enter Bag 2 Quantity: "))

print("Before Swap:", bag1, bag2)
temp = bag1
bag1 = bag2
bag2 = temp
print("After Swap:", bag1, bag2)

print("Panvir, S031")

```

Output:

```

----- RESTART: D:/Panvir/PY 101
Enter Farmer Name: Raju
Farmer Name: Raju
Enter weight of Crop 1: 15
Enter weight of Crop 2: 20
Total Weight = 35.0
Enter Harvested Area: 500
Square Root = 22.360679774997898
Enter Base: 50
Enter Height: 20
Triangle Area = 500.0
Enter Bag 1 Quantity: 2
Enter Bag 2 Quantity: 3
Before Swap: 2 3
After Swap: 3 2
